N_2O Source Distribution

Total source
 $\sim 17 \text{ Tg-N yr}^{-1}$

Total sink
 $\sim 13 \text{ Tg-N yr}^{-1}$

- agricultural soils
- natural soils
- ocean
- industry
- biomass burning
- other

Interannual Variability

- Thompson et al, 2013
- Ishijima, et al, 2009
- ENSO, QBO
- soil moisture
- temperature

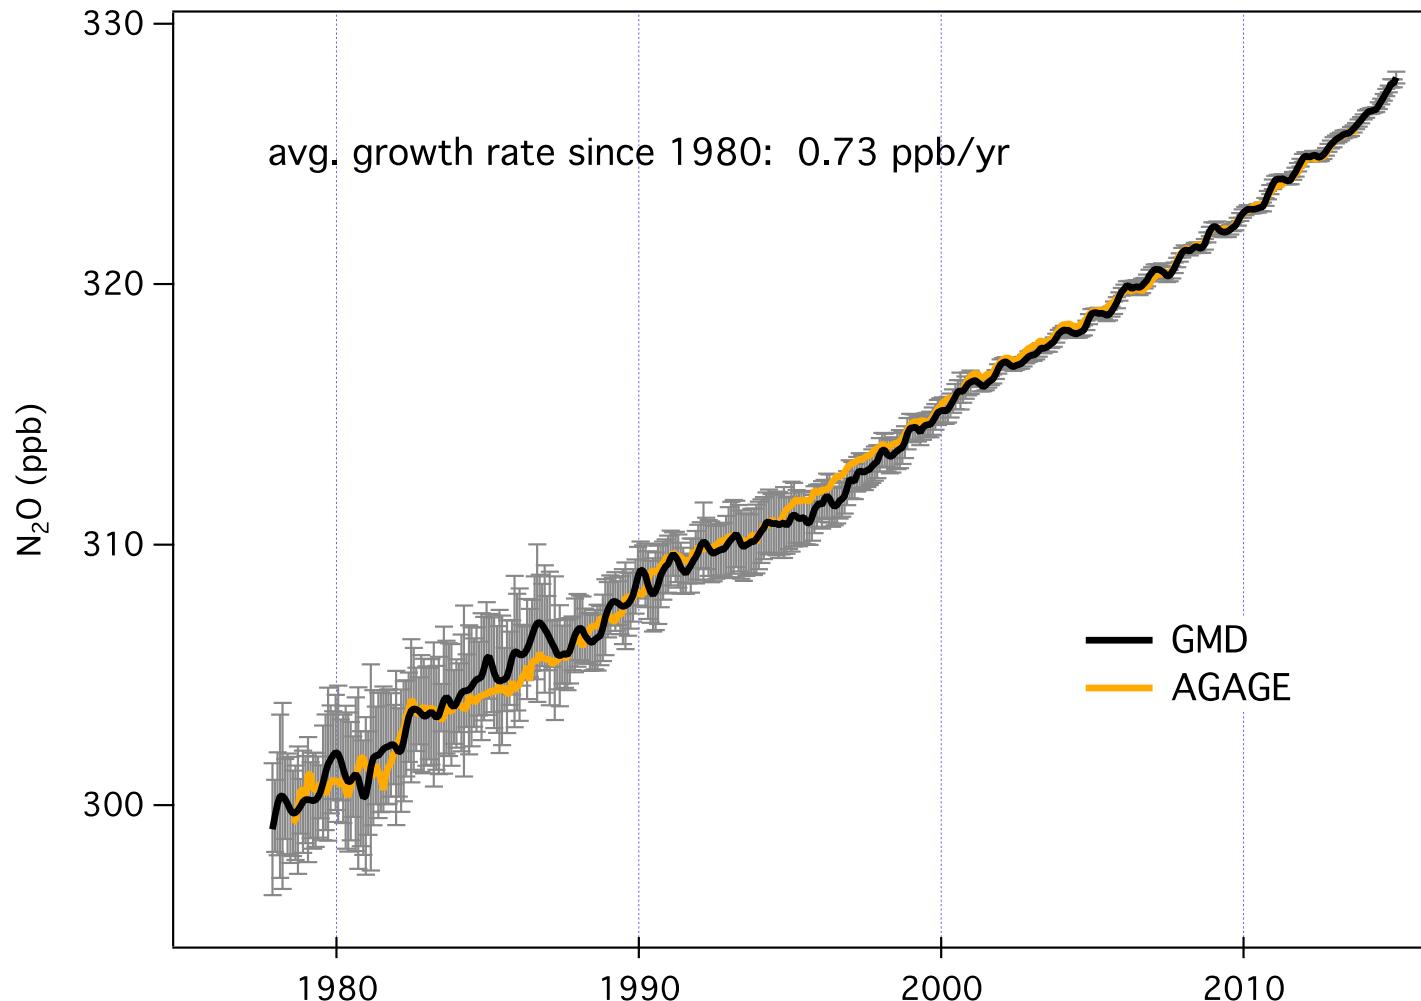

Seasonal Cycle

- Nevison et al, 2011
- Hamilton and Fan, 2000
- STE
- ocean exchange (thermal)

Global Emissions (inverse model, ecosystem model)

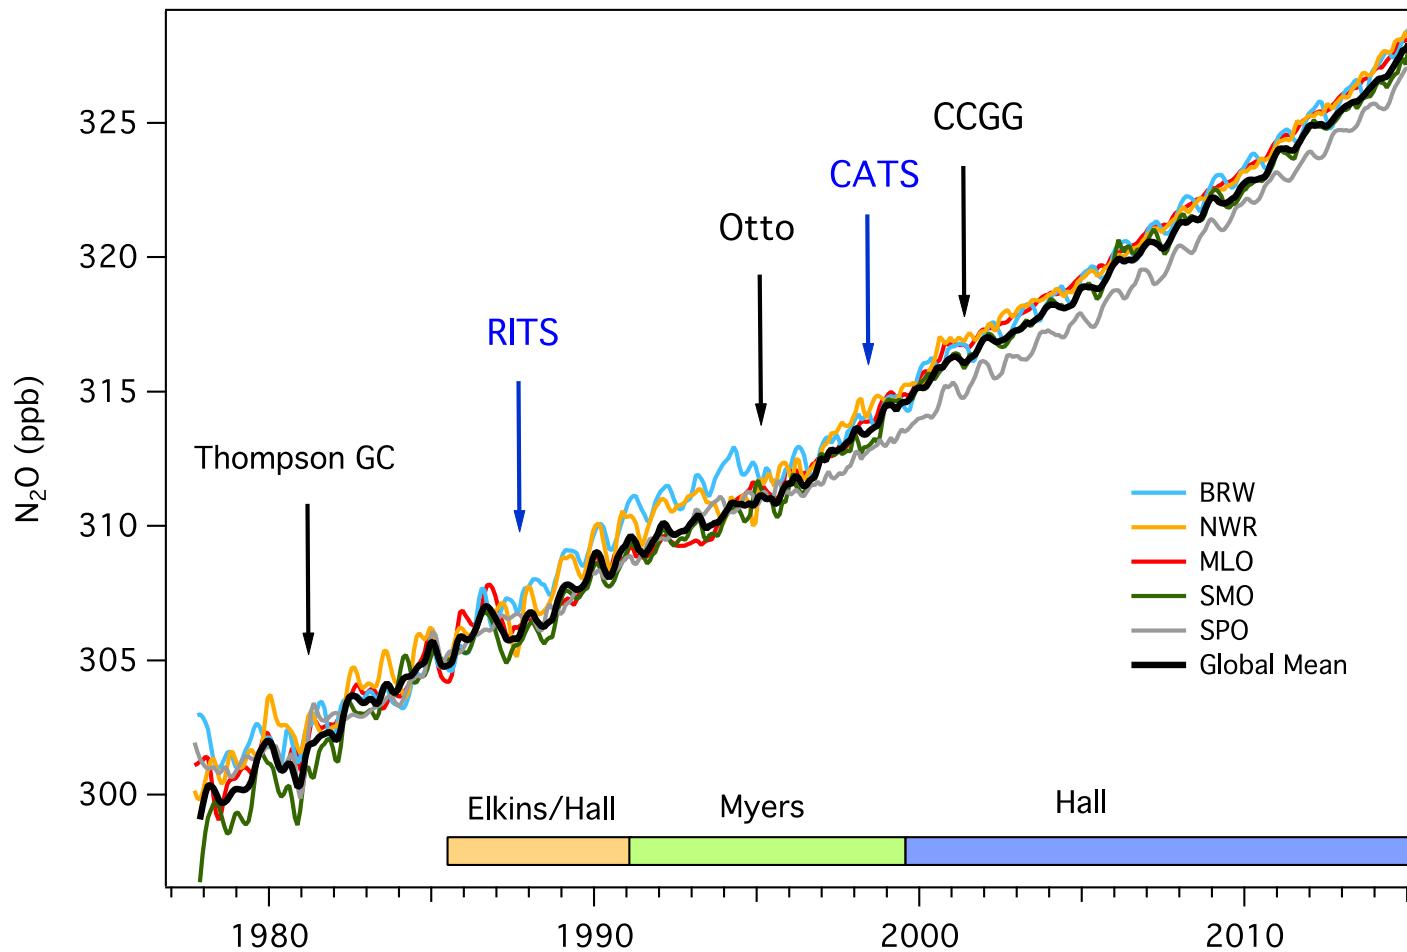

- Thompson et al, 2014
- Saikawa et al, 2014
- Huang et al, 2008
- Tian et al, 2015

Global mean N₂O

Instrumentation/Methods/Programs

N_2O growth rate

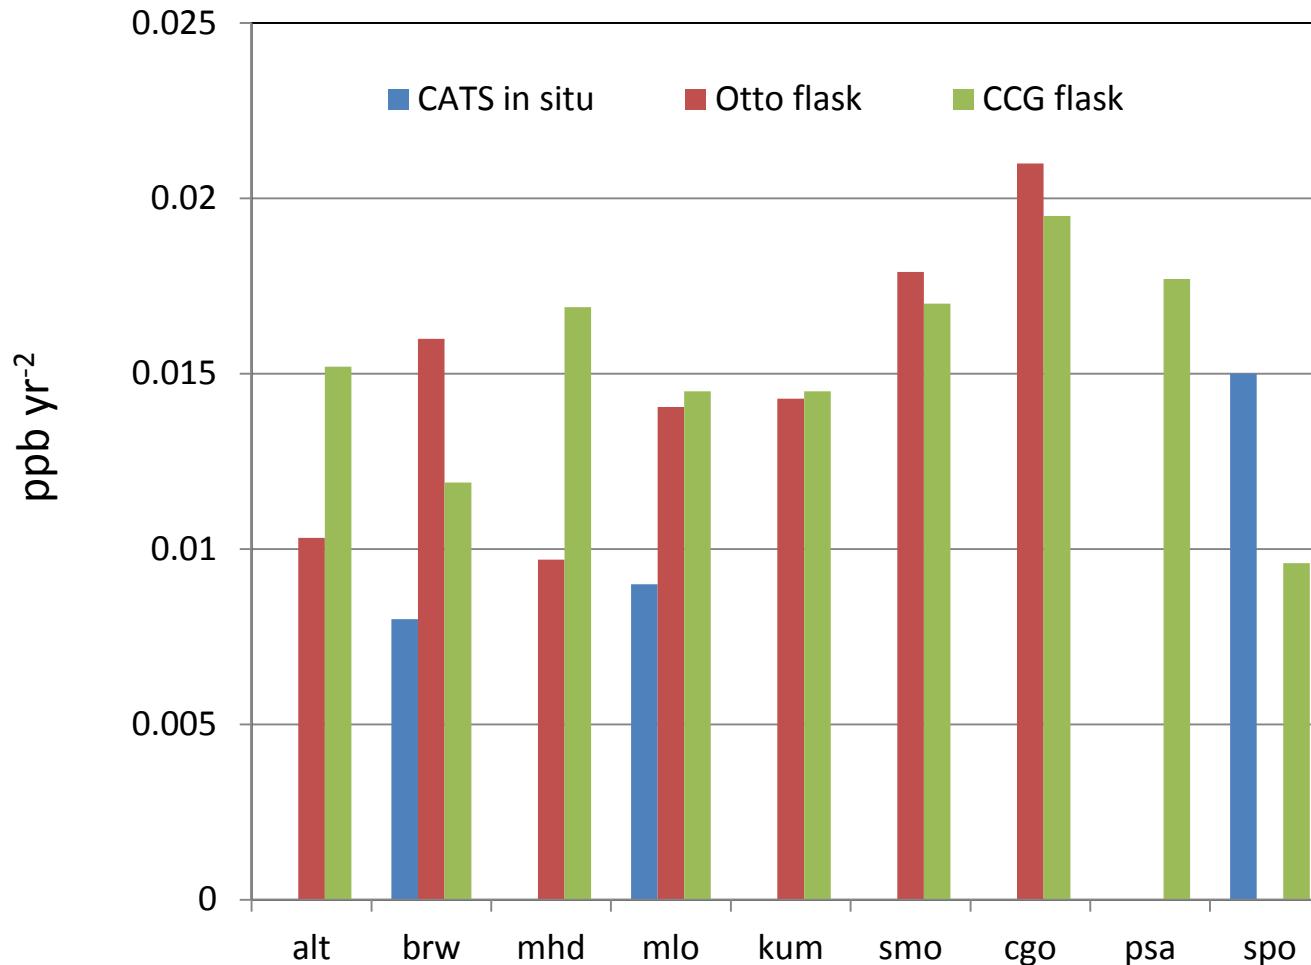

Focus on 2002-2013: Expanded global coverage,
improved instrumentation

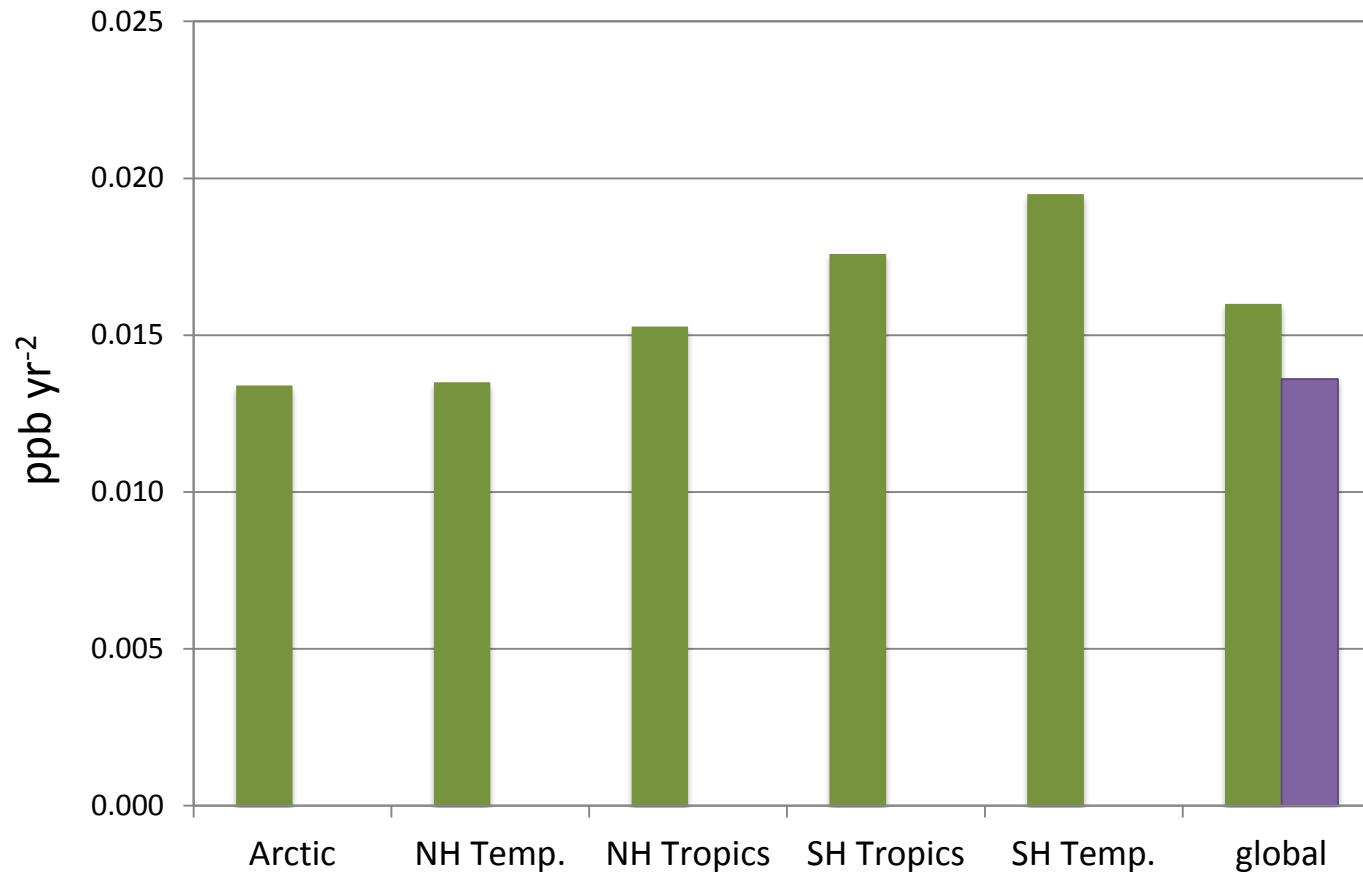

2ND Order Term, least squares fit: ppb yr⁻² (2002-2013)

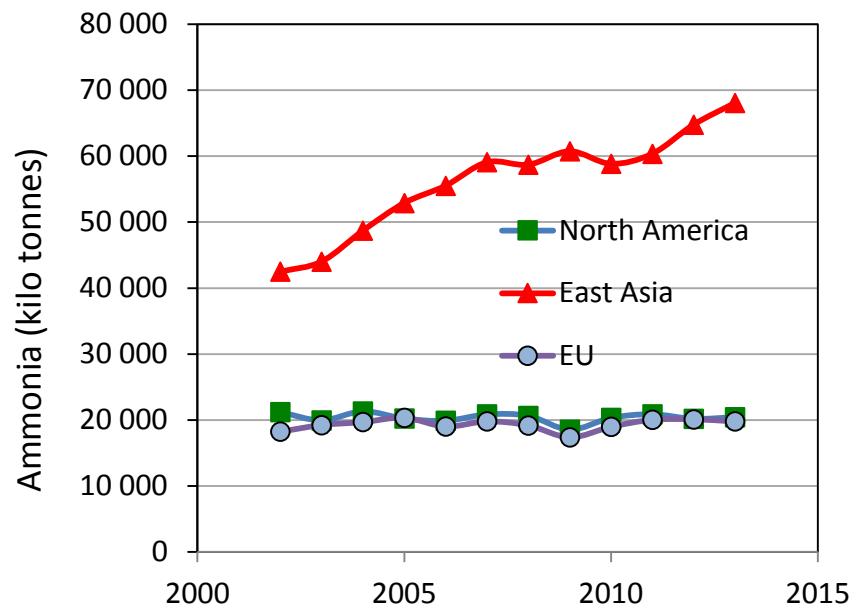

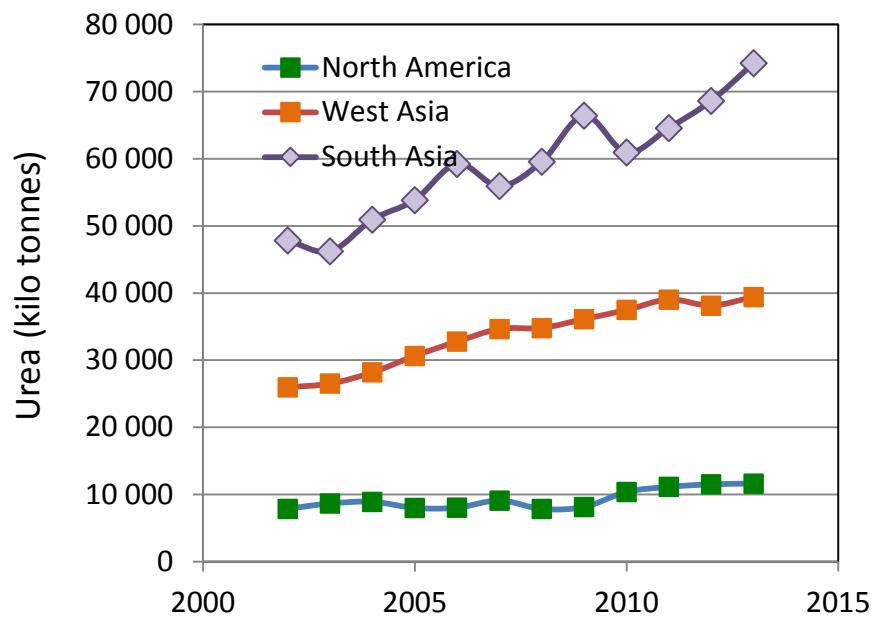

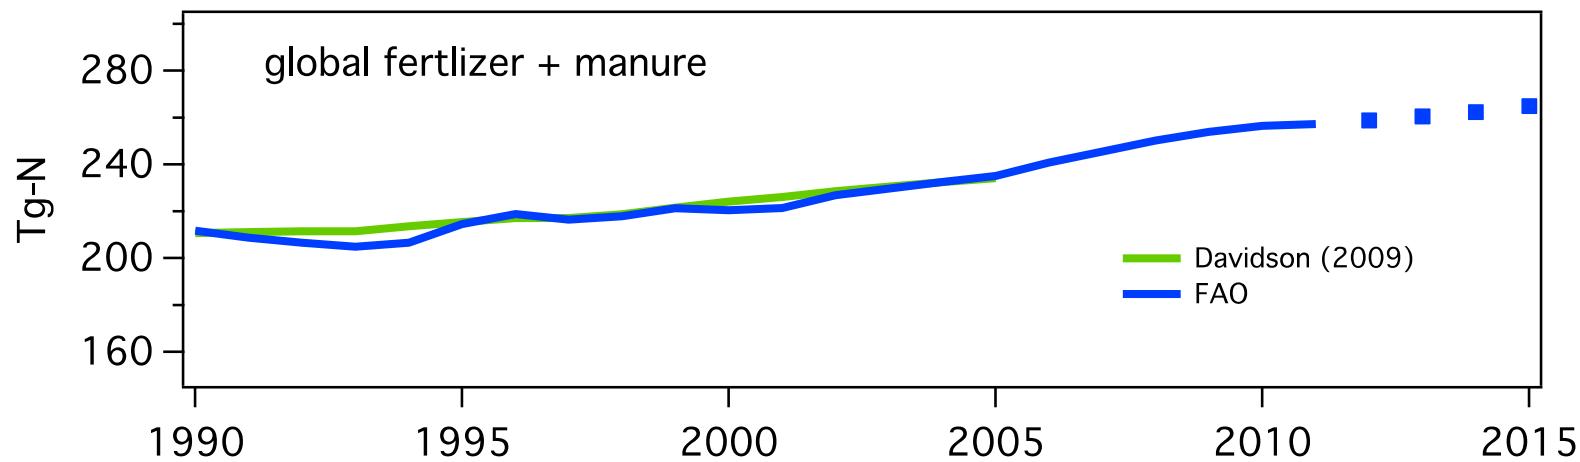

Individual programs at select measurement sites

2ND Order Term, least squares fit: ppb yr⁻² (2002-2013)

Zonal Means from CCG flask data

Recent Emission Trends from Modeling Studies

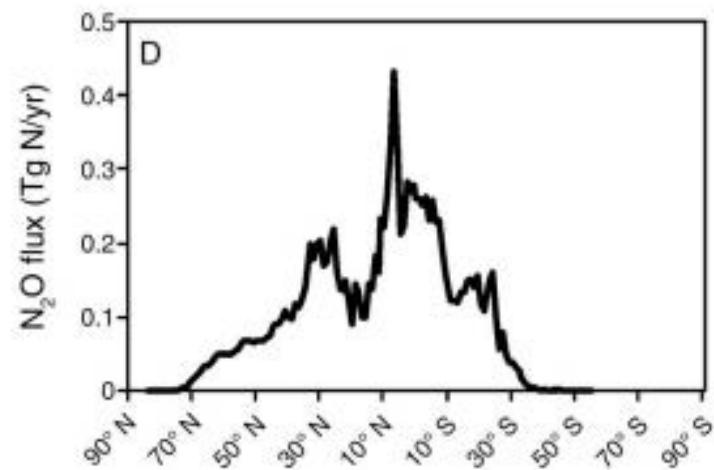

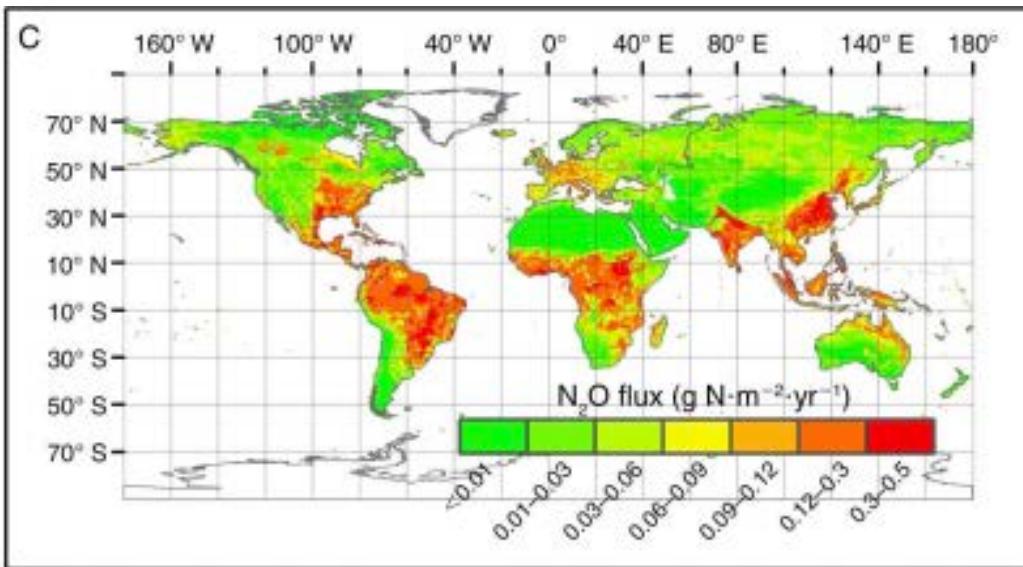

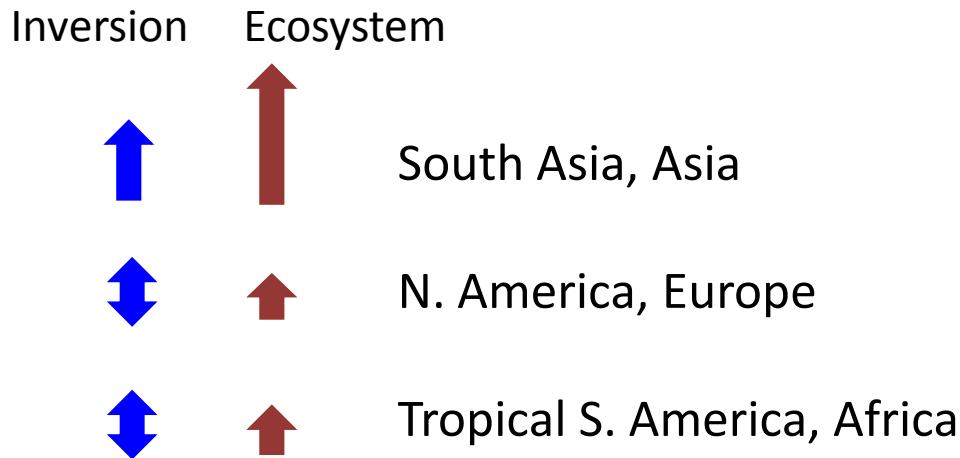

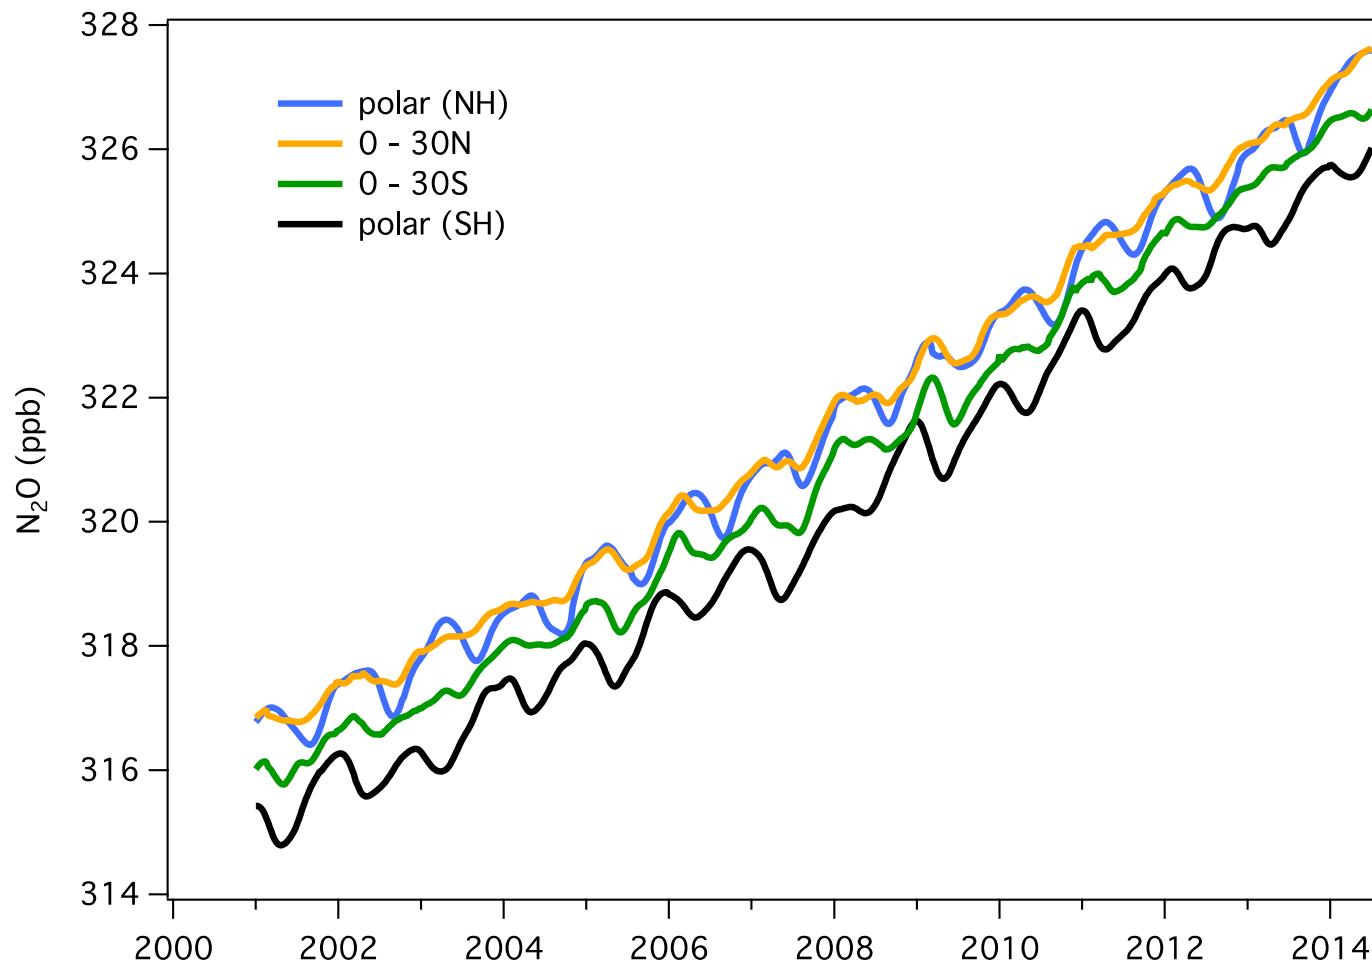

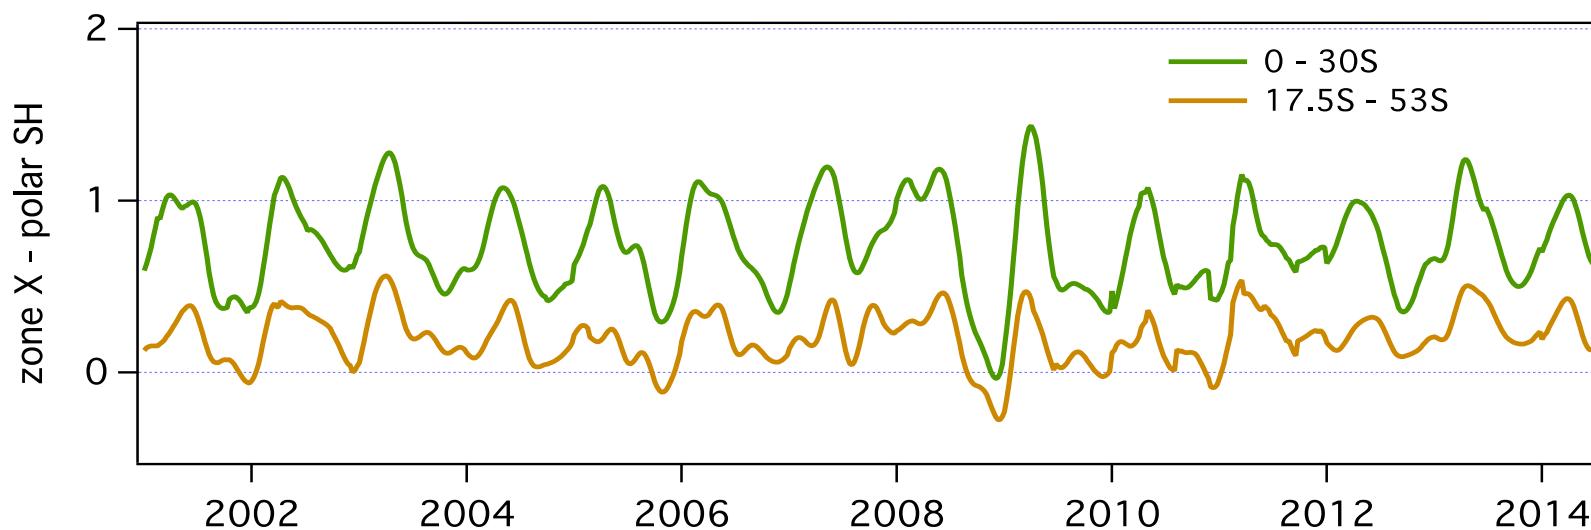

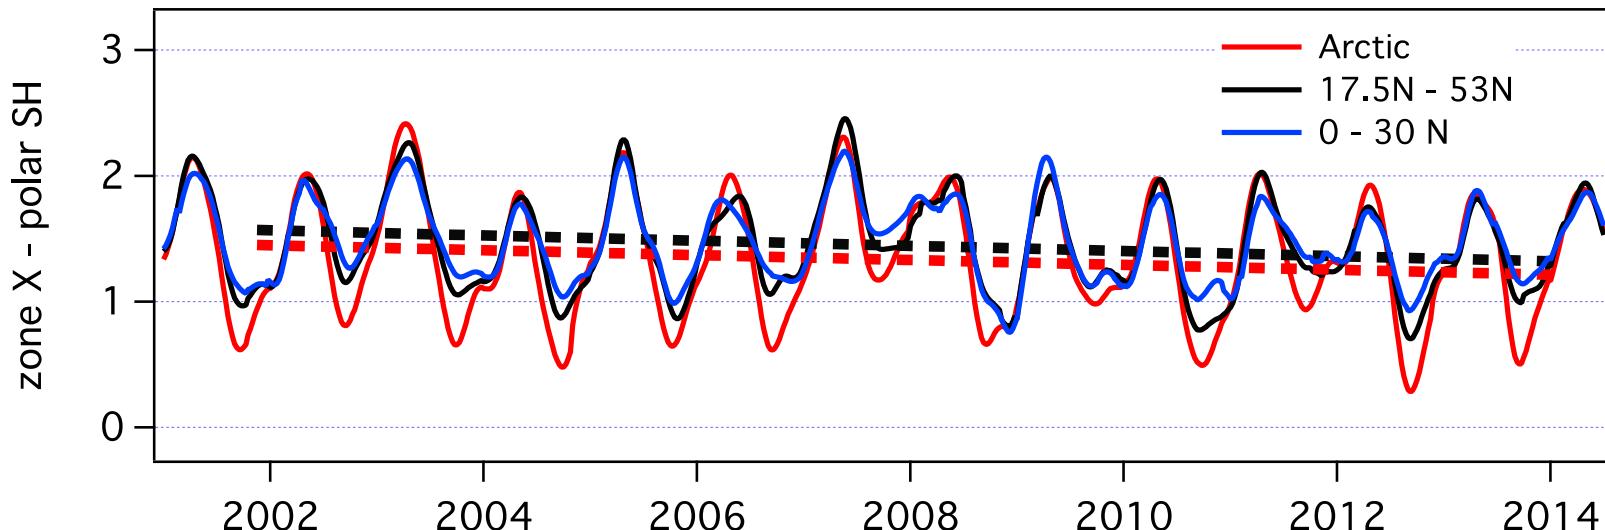

Fig. 6 from Tian et al, 2015 {doi/10.1890/EHS14-0015.1}

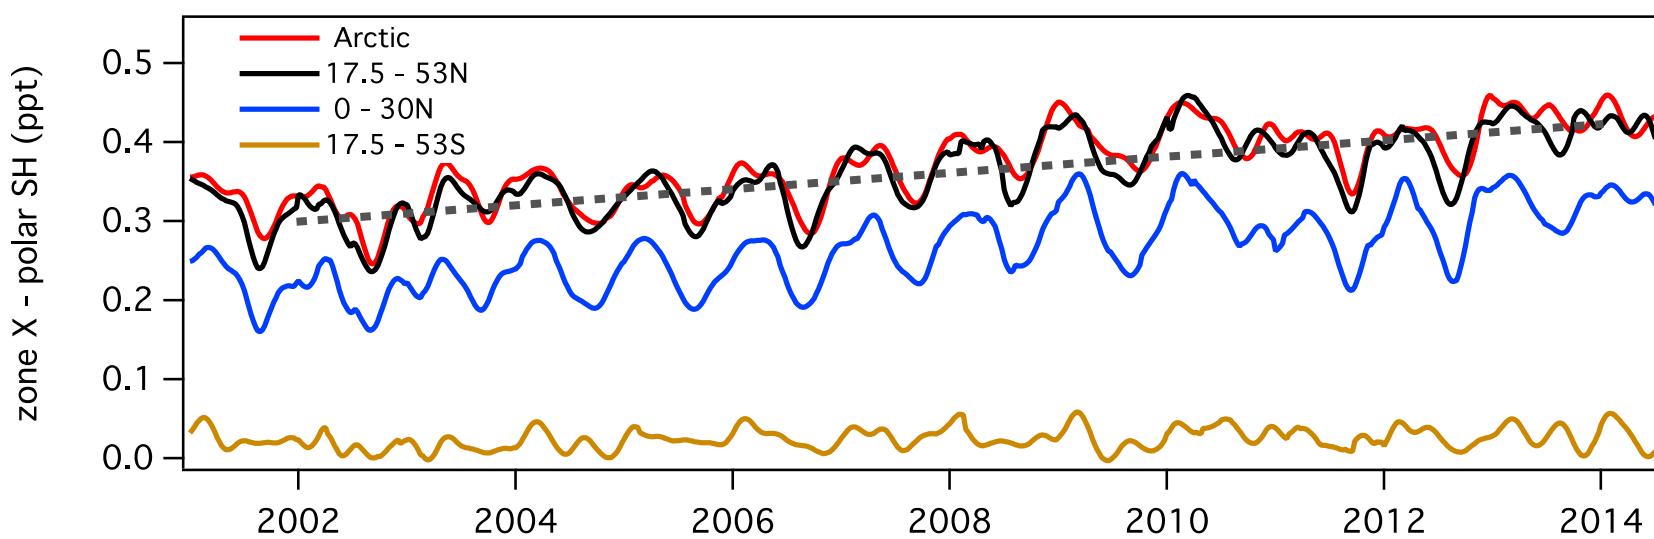

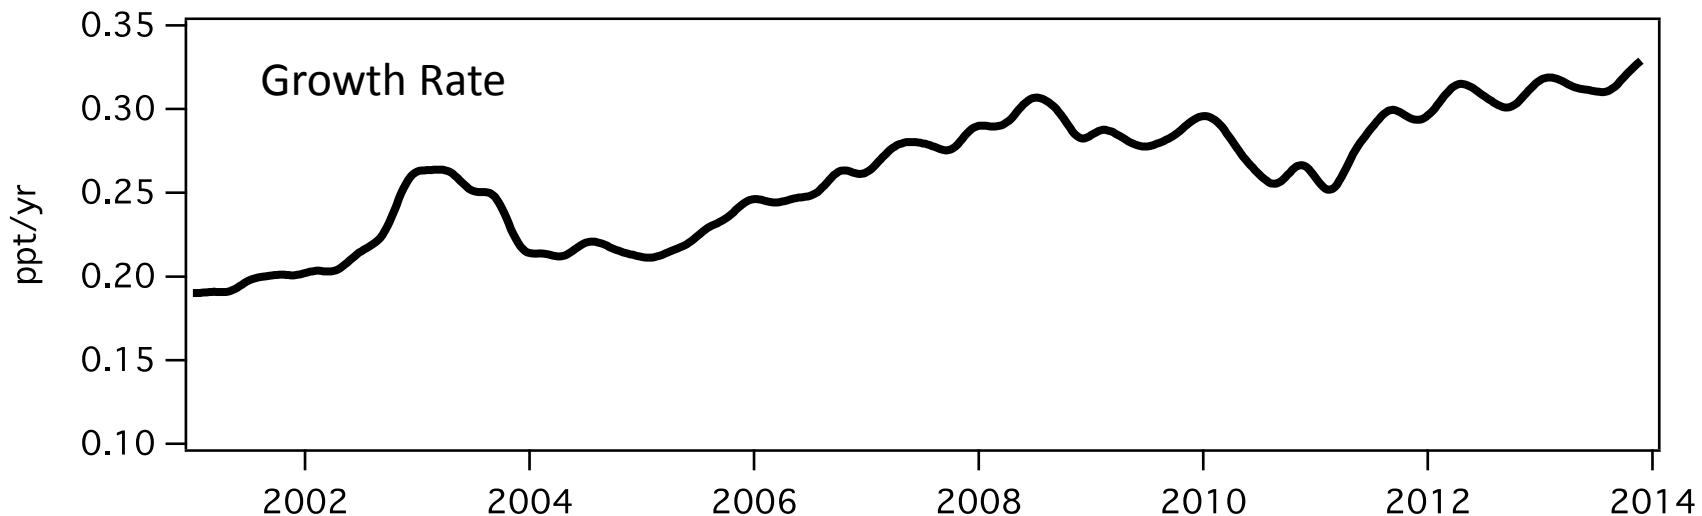

Zonal means: well-resolved gradients

Compare N₂O zonal averages

Compare to SF₆

Summary

- N₂O growth rate increasing since ~2003
 - >> acceleration: 0.014-0.016 ppb/yr²
- observed globally
- higher growth rates in S.H.
- mean growth rate in 2013: ~1 ppb/yr
- inter-hemispheric difference is decreasing
 - >> ~0.15 ppb over 10 years
- influence of climate drivers on tropical S.H. emissions?
